

HOW GOVERNMENTS TALK ABOUT

Data centers on social media.

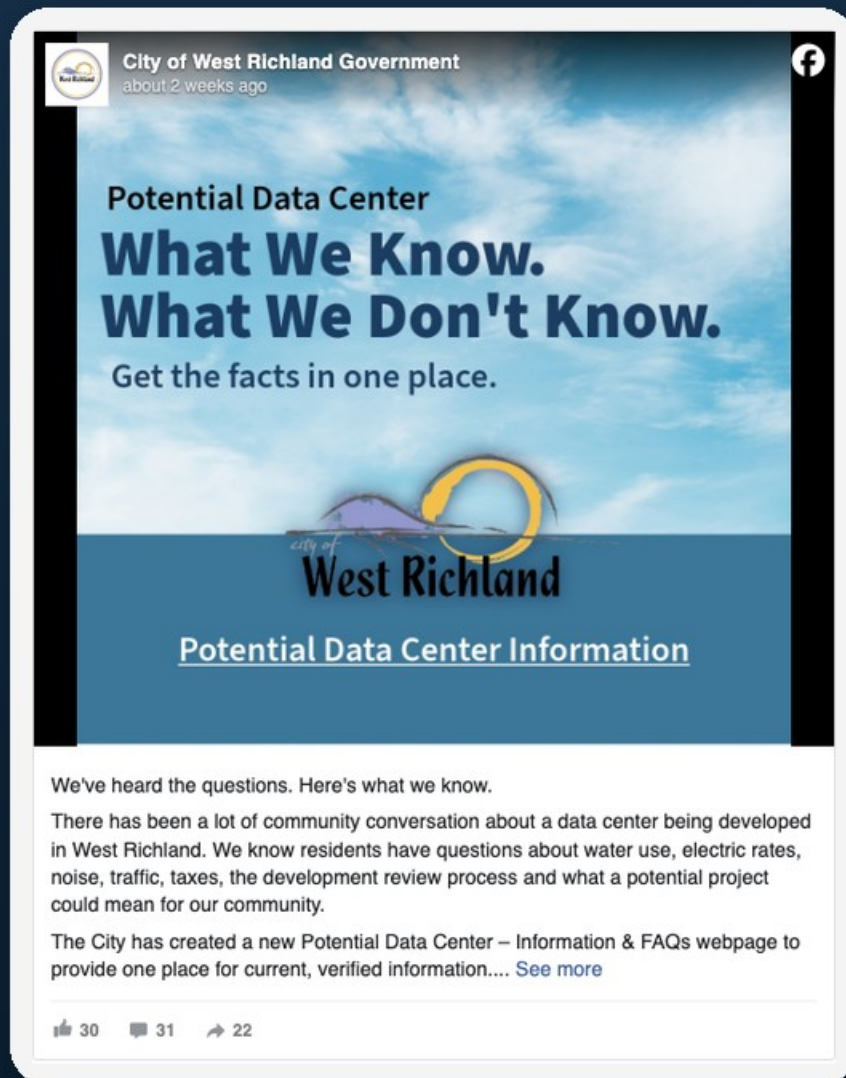

Proposals are landing on local agendas, and residents arrive with questions about water, power, noise, and taxes. Three ways governments are answering them.

Three real Facebook posts →

- West Richland, Washington
- Logan, Utah
- Chesterfield County, Virginia

WEST RICHLAND · WASHINGTON

Put the answers in one place.

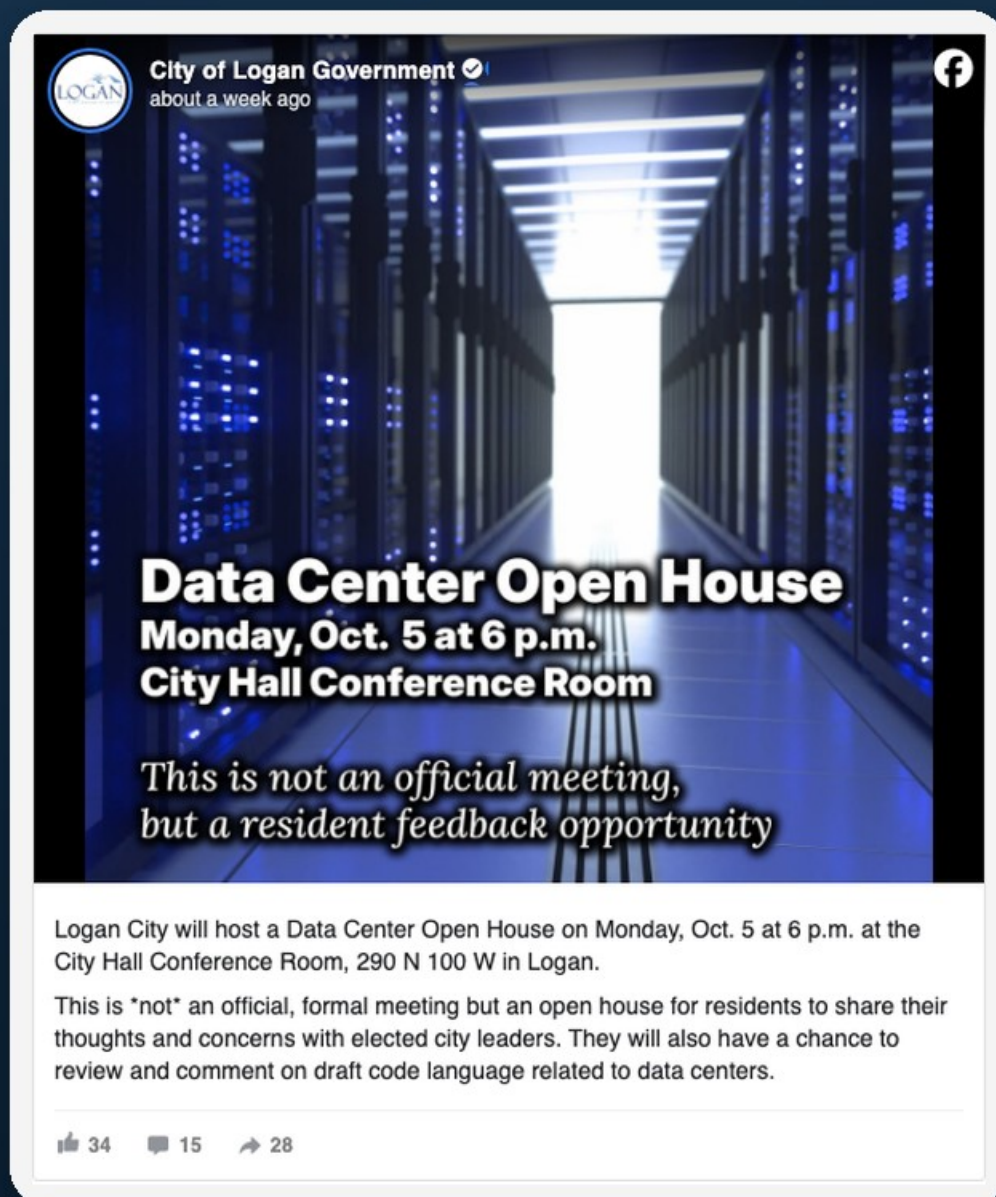

WHY IT WORKS

“What we know. What we don't know.” The city named the questions residents were asking and pointed to one FAQ page with verified answers.

LOGAN · UTAH

Make it easy to be heard.

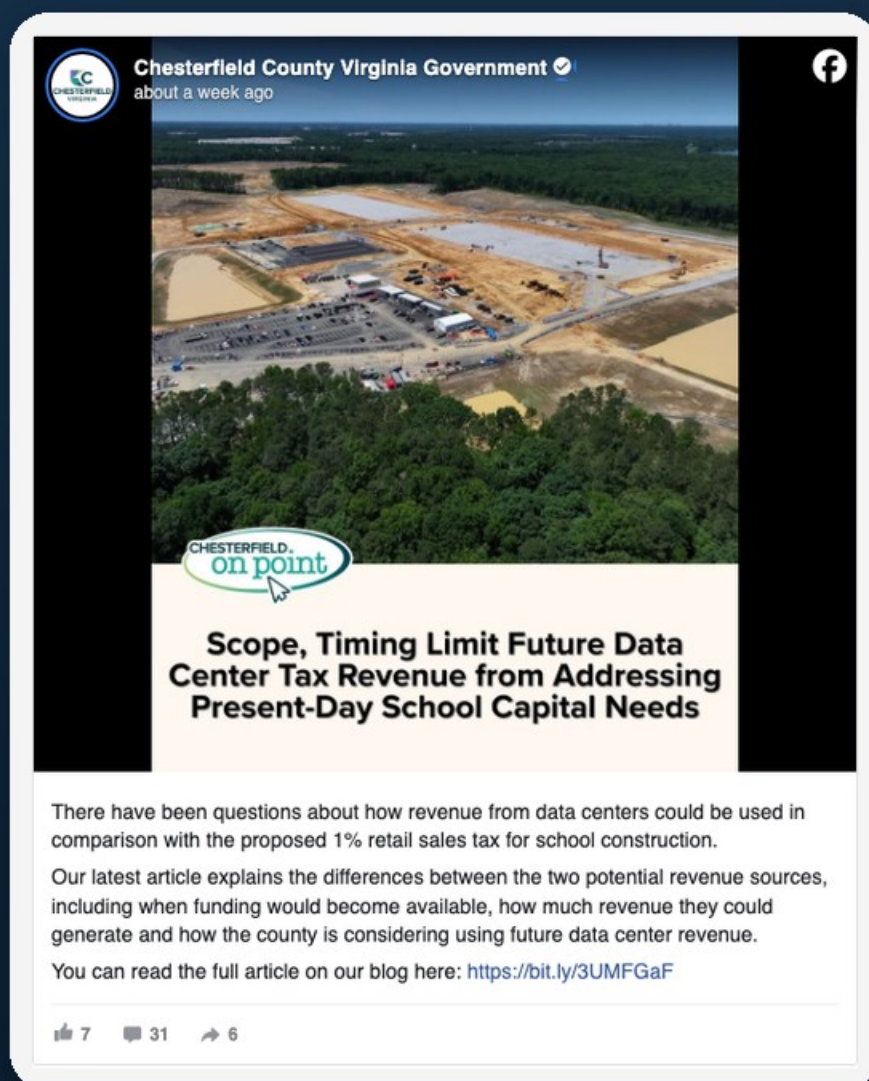

WHY IT WORKS

An open house, not a hearing: a resident feedback opportunity with elected leaders in the room and draft code language to review.

CHESTERFIELD COUNTY · VIRGINIA

Explain the money honestly.

WHY IT WORKS

Residents asked whether data center revenue could fund school construction instead of a new sales tax. The county explained the timing and scope of each.

THE THROUGH-LINE

Name the questions. Then answer them.

The governments handling this well start from what residents are actually asking: facts in one place, a low-pressure way to weigh in, and honest numbers.
